

PRESS RELEASE

ETIX DATACENTER IS ANNOUNCING DELIVERY OF ITS FIRST 4,000m² IN Q4 2011

France, June 2, 2010. **Etix DataCenter, Carinae Group's new tier 4, eco-friendly hosting center is announcing that the 2 involved towns have granted it planning permission, and it has rescheduled delivery of the first 4,000m² of Premium hosting space for Q4 2011.** Building rehabilitation will start in mid July 2010, conducted by two subsidiaries of the Bouygues Construction group: Brézillon for the enclosed and covered part and ETDE for the technical aspects.

The administrative timetable also gave Etix DataCenter the opportunity to conduct additional studies with Critical Building and Sodéarif consultants, aimed at offering its customers hosting services of an exemplary quality. These studies will help perfect building security, improve performance and offer Etix DataCenter customers a tier 4 service level across 10,000m² of hosting space split into 16 private or shared storage areas.

The highest-density Datacenter in Europe and the best overall PUE on the French market

Through its ground-breaking design, Etix DataCenter is paving the way for a new generation of datacenters that combine the best guarantees in service continuity (tier 4) with the most advanced technologies in matters of density (basic power density of 1.875 kW/m²), energy efficiency and a low carbon footprint.

Etix DataCenter's energy efficiency, sustainable development and low carbon footprint are achieved thanks to a combination of new technologies which limit the impact of its operation on the environment, a PUE that does not exceed 1.5, and compliance with ISO 27001:2005 and ISO 14001. Etix DataCenter will therefore consume 35% less energy than a current datacenter.

About Etix DataCenter

Founded in 2009, Etix DataCenter is Carinae Group's new tier 4-designed eco-friendly hosting center. Located in Pantin with immediate proximity to Paris, its 10,000m² of Premium hosting is split into 16 private or shared areas. Designed to blend eco-friendliness with high performance, its technological solutions and the specifications its customers are asked to observe ensure a PUE of less than 1.5. With its Free Cooling system and Cold Corridors, Etix DataCenter provides best-in-class hosting technologies and can house the most critical IT resources for the world's leading corporations. Etix DataCenter is paving the way for a new generation of hosting centers. For more information: www.etixdatacenter.com – www.carinaegroup.com
